Key findings

- Organic search revenue increased by 48.7% compared to 2020-W47, with a notable single-day revenue anomaly of \$2,903 on 2020-11-24.
- Simulated paid search spend rose 45.6% week-over-week, with high-severity spend anomalies recorded between 2020-11-26 and 2020-11-28 that may be related to the Thanksgiving to Cyber Monday period.
- The unknown channel saw a 388.1% increase in revenue, though it continues to represent a significant portion of total traffic.

Things to check

- Investigate the 28 purchases missing revenue to determine if there is a tracking issue with specific checkout flows.
- Review the simulated paid search cost per session and spend anomalies to assess if the increases align with expected seasonal bidding strategies during the Black Friday period.
- Examine the high volume of unknown channel sessions to identify potential misconfigurations in traffic source tagging.

Paid channels SIMULATED SPEND

Channel	Spend	Δ	Cost per session	Δ	CPA	Δ	ROAS	Δ
Paid search	\$490.91	▲ 45.6%	\$0.73	▲ 32.6%	\$163.64	▼ 2.9%	0.73	▲ 244.3%

The GA4 sample has no ad spend or ad clicks. Spend is simulated (seeded), and sessions stand in for clicks, so cost per session is reported instead of CPC. For costs an increase (▲) is unfavourable.

Charts

Funnel steps count sessions. A step can exceed the previous one because a session can start checkout with a cart filled in an earlier session.

Anomalies

6 anomalies were detected in 2020-W48; the 6 most severe are listed. Seasonal notes give possible context, not causes.
