Summary

AI-GENERATED SUMMARY

In 2021-W02, total revenue increased by 39.0% compared to 2021-W01, while total sessions decreased by 4.6%. Data quality caveats include that 8.1% of purchases had no revenue recorded and 39.3% of sessions had an unknown traffic source. The paid_search channel experienced significant volatility in simulated spend and performance metrics throughout the week.

Summary generated by an AI model from the numbers in this report.

Key findings

- The paid_search channel recorded a simulated CPA of \$352.58, which represents a 194.7% increase compared to the previous week.
- Organic search revenue grew by 35.6%, contributing to a total revenue of \$4,055 for that channel.
- The unknown channel accounted for 39.3% of total sessions, which may be related to tracking configurations or traffic attribution issues.

Things to check

- Investigate the high simulated CPA in paid_search to determine if the increase in simulated spend on specific days is related to bidding strategies.
- Review the 20 purchases missing revenue to identify if these events are linked to specific payment gateways or checkout errors.
- Examine the unknown channel traffic to see if it could reflect mislabeled referral sources or technical issues with session tracking.

Δ is the change versus the previous complete week. Conversion rate = sessions with a purchase / sessions.

Paid channels SIMULATED SPEND

Channel	Spend	Δ	Cost per session	Δ	CPA	Δ	ROAS	Δ
Paid search	\$705.16	▲ 96.5%	\$1.11	▲ 91.5%	\$352.58	▲ 194.7%	0.20	▲ 0.4%

The GA4 sample has no ad spend or ad clicks. Spend is simulated (seeded), and sessions stand in for clicks, so cost per session is reported instead of CPC. For costs an increase (▲) is unfavourable.

Charts

Funnel steps count sessions. A step can exceed the previous one because a session can start checkout with a cart filled in an earlier session.

Anomalies

11 anomalies were detected in 2021-W02; the 8 most severe are listed. Seasonal notes give possible context, not causes.
